

# Concrete Scanning

The assessment of concrete structures is becoming increasingly important. More and more General Contractors are requiring the concrete be scanned before any cutting, drilling or coring operation is to commence. The cost associated with the repair of damaged embedded post-tension cables, utility conduits and key reinforcing steel makes our locating services an important part of a today's new construction and tenant improvement projects.

BTL is one of the pioneers in the use of GPR in Northern California. We have participated in several projects ranging from private residence to high rising buildings both private and public ones. Our technicians have the training and experience to provide our clients with a service that set us apart from our competitors. We are a total satisfaction company and our motivation is to provide our customers with solutions to their concrete scanning needs.
